

Advancing Healthcare Through Cognitive Insights

Traditional Pen and Paper Cognitive Tests are Antiquated

- Takes up to **six hours** to administer when providers could spend quality time with patients and get reimbursed.
- Results are inconsistent across providers.
- Takes hours of administrative time to score and report results.

Savonix Delivers 21st Century Gold Standard Digital Assessments

With Savonix, providers can eliminate paper assessments and spend quality time with their patients. Our cognitive assessments can be taken **remotely** on any mobile device, and only take 30 minutes to complete, allowing patients to test early and regularly.

Hidden Cognitive Impairment is Dangerous for Your Patients

- **About half** of all patients with cardiovascular disease and cognitive impairment fail to adhere to their medication regimen.
- Cognitively impaired patients with Chronic Obstructive Pulmonary Disorder (COPD) are at **twice the risk** of rehabilitation program failure.
- Cognitively impaired patients with diabetes are almost **30% less likely** to follow exercise regimens and almost **40% less likely** to stick to the recommended diet.

Savonix Delivers Accurate and Accessible Digital Assessments

Our Savonix assessments, mapped to DSM-V and CMS criteria, measure cognitive function across 13 domains. Our assessments are **accurate** and detect mild cognitive impairment 93 percent of the time.

Our Personal Summary Report is delivered **immediately** and **securely** to both patient and provider.

Patients with dementia visit the emergency room twice as often

3 in 5 individuals present multidomain impairments in the early stages before developing dementia

Up to 44 percent of mild cognitive impairment is reversible

Adults aged 50+ who rank cognitive health as one of their top 3 concerns

Savonix Helps Deliver Better Quality Patient Care.

We provide a cost effective, scalable method to screen for cognitive impairment that mirrors the gold standard for neuropsychological assessment.

Developed by our team of neuropsychologists and based on years of research, our cognitive tests can be completed remotely on any mobile device.

The Savonix Personal Summary Report

The Personal Summary Report (PSR) is available immediately so you and your patients can view their test results. You can target care and create a personalized plan for each patient to improve their cognitive health. The PSR includes results from the Lifestyle Questionnaire that shows patients how their daily behavior relates to brain health.

Date of Birth: 1957/03/16 | Gender: Female | Education: Doctorate Degree | Color Blind: No

Test Results

Cognition is the ability of your brain to think, learn, understand and remember. Cognitive function is an indication of brain health. The table below shows your current cognitive functioning compared with people the same age as you.

Domains	Below Average	Average	Above Average
Instant Verbal Memory	0th		
Delayed Verbal Memory	16th		

Comprehensive Personal Report

Cognitive Function

Cognition is comprised of different areas or 'domains'. The Savonix domains are divided into Instant Verbal Memory, Delayed Verbal Memory, Impulse Control, Focus, Attention, Emotion Identification, Processing Speed, Flexible Thinking, Working Memory, Executive Function, and Spatial Memory.

Instant Verbal Memory: Score: 0th, Below Average. Instant verbal memory is the ability to recognize words from short term memory. We use our verbal memory to remember a shopping list or learn names.

Customizable message

“If you have questions about your report, please contact your primary care physician.”

Test results – brief

Test results are first displayed in color-coordinated percentiles for easy understanding.

Comprehensive report - detailed

This section provides more detail about each component of the assessment, including the effects of lifestyle behaviors on brain health.

SavonixCare

SavonixCare enables providers to generate a cognitive care plan in real-time, immediately following the Savonix cognitive assessment.

With SavonixCare, contextualize your patient’s health data with diagnostic support detailed by the DSM-V, and implement interventions in a timely manner to improve patient outcomes.
